

1. enter length in centimeter and convert it into meter and kilometer.
2. enter temperature in Celsius and convert it into Fahrenheit.
3. Python program to find power of any number x^y .
4. to check whether a number is even or odd using bitwise operator.
5. check whether a character is alphabet or not.
6. to find maximum between three numbers.
7. to find all roots of a quadratic equation.
8. to count number of digits in a number.
9. to check whether a string is palindrome or not.
10. to calculate factorial of a number.
11. to print Fibonacci series up to n terms.
12. print all Strong numbers between 1 to n.
13. to print all ASCII character with their values.
14. count total number of vowels and consonants in a string.
15. to find highest frequency character in a string.
16. remove all repeated characters from a given string.
17. Declare a variable without breaking any of the rules
18. Declare this variable "break = 50". Which rule does it break ?
19. Make changes to these variables so that they no longer break the rules to
 1. phone\$number = 12345
 2. 123Name = "Benny"
20. Write a program to create a tuple of 4 elements
21. Convert this tuple into a list
22. Now delete the first element in this list and convert it back to tuple
23. Solve this equation manually.
$$2 + 3 * 4$$
Now write a program to solve this.
Did you get the same answer?
24. Use a logical operator in between two comparison operators and return the value as true
25. Write a program to create a list of 5 elements Update the value at 3rd element of the list
Create another list of 3 elements. Now create a final result as a concatenation of the first two lists
26. Write a program to create a dictionary with 5 key-value pairs Update the value of a key
Copy this dictionary to another dictionary and clear the first dictionary
27. write a program to check if a number is less than 10
28. Write a program to check if a given number is odd or even, Write a program to check if a number is divisible by both 10 as well as 50. If it is divisible by 30 as well, print "This number is divisible by 10, 50 and 30". If not, print "This number divisible by 10 and 50 but not 30"
